LI YUNQIANG

Data Science (B.Eng.) - Full-stack / AI Application Developer

Chengdu, China | github.com/lii-lii321 | 3028410005@qq.com

EDUCATION

Southwest Petroleum University - B.Eng. Data Science & Big Data Technology (in progress)

Coursework applied directly into shipping products: every skill below is exercised by an open-source repo.

OPEN-SOURCE PROJECTS (ALL LIVE AND RUNNABLE)

Math_Tutor_RAG - Visual-LLM + RAG mistake-notebook (2025 - present)

Photo-to-question capture -> structured parsing -> vector archive -> SM-2 spaced review.

- 464+ automated tests (pytest, CI green); 6 pluggable LLM providers; 10+ feature modules.

smart_tutor - Multi-tenant tutoring order matching platform (2025 - 2026)

End-to-end digitization: WeChat chat logs in, structured orders out, deposits and balances settled online.

- 71 orders parsed from one batch of WeChat text (AI pipeline with human review); 3 roles covered.
- 100% of the core flow online: posting -> matching -> trial class -> deposit / balance.

research-lab - One CSV in, one reproducible research report out (2026 - present)

- 5-stage automated pipeline: profile -> questions -> plan -> statistical tests -> report.
- 100% reproducible: raw p-values archived with reproduction scripts; Streamlit / CLI / Python API.

Traveling (this website) - Zero-JS personal site (2026)

- 1047 photos / 11 albums auto-ingested from a 6,700+ photo library; 0 KB client-side JS on the homepage.
- Lighthouse 100/100/100/100 on the homepage; hover prefetch site-wide.

SKILLS

```
Languages    Python / TypeScript / SQL
Frontend      Vue 3 / React / Astro / Streamlit / Tailwind CSS
Backend      FastAPI / SQLAlchemy / MySQL / PostgreSQL / Redis GEO
AI / Data      RAG / ChromaDB / Vision LLMs / Agent-MCP / SM-2 / SciPy
Engineering  Docker / GitHub Actions / pytest / Playwright / Alembic
```

SELECTED WRITING (ON LII-LII321.GITHUB.IO)

- Search on a zero-JS site: build-time index + a 3 KB runtime
- Ingesting 6,700+ travel photos: sampling, compression, and a HEIC pitfall
- From WeChat group text to structured orders: an AI parsing pipeline
- Making RAG retrieval quality measurable: from vibes to reproducible metrics

STATUS: Open to internship and remote collaboration. Updated 2026-10-25 - lii-lii321.github.io
